

PREVENTIVE MEDICINE & COMMUNITY HEALTH

Founded 1912 to Protect the Public's Health

Public Health Track

The Public Health Track provides medical students interested in public health careers or concerned about public health issues with **focused training in public health research and practice skills** within the four-year Integrated Medical Curriculum.

Courses and activities guide students in developing knowledge, skills, and values regarding:

- **Structure and functions of public health systems**
- **Physician's role in public health practice**
- **Evidence based public health planning**
- **Public health research**
